Operator in Europe

Project Goals

To evaluate the costs and benefits of the merger of two mobile networks in highly confidential environment („clean team")

NETWORKS Approach

- Project setup in short time by automated data processing using standard interfaces
- Estimate the future utilization of each network individually
- Merge both networks and estimate costs for merging and savings of the merged network
- Re-using standard functionalities, ad-hoc customization during project

Client Benefits

- Visualization of planned network with deep dive capabilities for detecting cost drivers
- Providing trustful advisory to non-technical counterparts

NetWorks

a product of **DETECON**

Strategic Network Planning with NETWORKS TCM – defining optimal technology and rollout strategies.

Automated analysis of element configuration and performance data

- Process mid-term performance and current configuration data of individual network elements
- Calculation of various scenarios for impact and sensitivity analysis
- Accurate and detailed results in a short time
- Usage of NETWORKS applications Mobile Forecast and Technical Cost Modeling
- NETWORKS delivered in minutes, where Excel based tools required hours
